

Array: 2D Matrices

2D Matrix \rightarrow 2D array

it has rectangular grid of values

Declare:

`int mat [4][5]`

\rightarrow learn in your own language

`int mat [N][M]`

\rightarrow M columns

\rightarrow N rows

Rows are horizontal

Cols are vertical

Observation

\rightarrow If we move in i^{th} row, row no. is constant but col. will change $\rightarrow (i, 0, M-1)$

\rightarrow If we move in j^{th} col, col no. is constant but row will change $\rightarrow (0, N-1)$

Question 1

Given $\text{mat}[N][M]$, print row-wise sum.

	0	1	2	
0	1	5	7	$\rightarrow 1+5+7 = 13$
1	2	8	9	$\rightarrow 19$
2	7	6	2	$\rightarrow 15$

function sumRow($\text{mat}[N][M]$) {

for($i=0$; $i<N$; $++i$) {

//ith row

sum=0;

for($j=0$; $j<M$; $++j$) {

sum += $\text{mat}[i][j]$

}

print(sum)

SC: $O(1)$

TC: $O(N \times M)$

3 3

Question 2

Given $\text{mat}[N][M]$, print column-wise sum.

	0	1	2
0	1	5	7
1	2	8	9
2	7	6	2
	↓	↓	↓
	10	19	18

```
for (j=0; j<m; ++j) {
```

```
    sum = 0
```

```
    for (i=0; i<n; ++i) {
```

```
        sum += mat[i][j]
```

```
    }
```

```
    print(sum)
```

```
}
```

TC: $O(N \times M)$

SC: $O(1)$

Question 3

Given square $\text{mat}[N][N]$, print diagonals.

left \rightarrow right & right \rightarrow left

	0	1	2	3
0	0,0			0,3
1		1,1	1,2	
2		2,1	2,2	
3	3,0			3,3

$n=4$

left
to
right

```
i=0, j=0
while(i < N && j < N) {
    print(mat[i][j])
    i++, j++
}
```

TC: $O(N)$
SC: $O(1)$

OR

```
for(i=0; i < n; ++i) {
    print(mat[i][i])
}
```

$$0+3=3$$

$$1+2=3$$

$$2+1=3$$

$$3+0=3$$

In right to left

$$i+j = n-1 \Rightarrow j = n-1-i$$

$$i=0, j=n-1$$

```
while(i < N && j >= 0) {
    print(mat[i][j])
    i++, j--
}
```

TC: $O(N)$
SC: $O(1)$

OR

```
for(i=0; i < n; ++i) {
    print(mat[i][n-1-i])
}
```

Question 4

Given `mat[N][M]`, print all diagonals, going from right \rightarrow left.

Diagonals should start from 0^{th} row or $m-1^{\text{th}}$ column.

`mat[4][6]`

$$= M + N - 1$$

$$= N + M - 1$$

1
2 5
3 6 9
4 7 10
8 11
12

```
printDiagonals(mat[m][m]) {
```

```
// print all diagonals from  $0^{\text{th}}$  row
```

```
for (j=0; j<m; ++j) {
```

```
    r=0, c=j
```

```
    while (r<n && c<=0) {
```

```
        print (mat[r][c])
```

```
        ++r, --c
```

```
    }
```

```
} println()
```

// print all diagonals from $m-1^{\text{th}}$ column

```
for ( $i=0$ ;  $i < n$ ;  $i++$ ) {
```

```
     $r = i$ ,  $c = m-1$ 
```

```
    while ( $r < n$  &  $c \geq 0$ ) {
```

```
        print(mat[r][c])
```

```
         $r++$ ,  $c--$ 
```

```
    } println()
```

```
}
```

TC: $O(N^2M)$

SC: $O(1)$

Question 5

Given $mat[N][N]$, calculate transpose of the matrix w/o extra space.

Transpose:

0th row \rightarrow 0th col
1st row \rightarrow 1st col
...

Transpose

$$[i, j] \rightarrow [j, i]$$

$$[i, i] \rightarrow [i, i]$$

for $(i=0; i < n; ++i) \{$

for $(j=0; j < n; ++j) \{$

swap($\text{mat}[i][j], \text{mat}[j][i]$)

}

↓

this will do double-swap

& we get original matrix

$$i=0, j=1$$

$$[0, 1] \leftrightarrow [1, 0]$$

$$i=1, j=0$$

$$[1, 0] \leftrightarrow [0, 1]$$

```
for (i=0; i<n; ++i) {
```

```
    for (j=i+1; j<n; ++j) {
```

```
        swap(mat[i][j], mat[j][i])
```

$\Rightarrow i < j$

TC: $O(N^2)$

SC: $O(1)$

```
swap(int x, int y) {
```

```
    temp = x
```

```
    x = y
```

```
    y = temp
```

```
}
```

Question 6

Given mat $[N][N]$, rotate 90° clockwise, from top-right.

SC: $O(1)$

	0	1	2	3	4
0	1	2	3	4	5
1	6	7	8	9	10
2	11	12	13	14	15
3	16	17	18	19	20
4	21	22	23	24	25

rotate
 \rightarrow
 90° clockwise

	4	3	2	1	0
0	21	16	11	6	1
1	22	17	12	7	2
2	23	18	13	8	3
3	24	19	14	9	4
4	25	20	15	10	5

	0	1	2	3	4
0	1	2	3	4	5
1	6	7	8	9	10
2	11	12	13	14	15
3	16	17	18	19	20
4	21	22	23	24	25

90°
clockwise

	0	1	2	3	4
0	21	16	11	6	1
1	22	17	12	7	2
2	23	18	13	8	3
3	24	19	14	9	4
4	25	20	15	10	5

transpose

	0	1	2	3	4
0	1	6	11	16	21
1	2	7	12	17	22
2	3	8	13	18	23
3	4	9	14	19	24
4	5	10	15	20	25

reverse

	0	1	2	3	4
0	21	16	11	6	1
1	22	17	12	7	2
2	23	18	13	8	3
3	24	19	14	9	4
4	25	20	15	10	5

90° clockwise = transpose + reverse

TC: $N^2 + N^2$
= $O(N^2)$

SC: $O(1)$

Doubt

$\text{int } a(n)$

$$a(i) = 10^7$$

$$n = 10^5$$

$$\sum a(i) = 10^{12}$$

$$\text{sum} = 0$$

for ($i=0$ to n)

$$\text{sum} = (\text{sum} + a(i)) \% (10^9 + 7)$$

return $\text{sum} \% (10^9 + 7)$
optional
